

Problem/Solution

- Problem: Dev needs a place to display/log their skills/work exp to impress recruiters. Our app provides a visually appealing platform for it.

Constraints

1. Time: Less than what it seems due to other commitments.
2. Function Scope:
Creep: Overloading with features leads to bad UX.
3. Originality: Too many similar CRUD applications. --> Why would the user go for our app?
4. Database:
Size/Feature Constraint: Not fit for scalability.

Possible Pitfalls / Rabbit Holes

1. Focusing on developing just one page / functionality
2. Over-engineering UI
3. Database complexity / Learning curve
4. Security for stored data
5. 3rd party dependency issues

No-Gos

Real time user collaborations
No offline functionality
No MFA
No themes that change UI
